

New technologies for manufacturing

Do you need to know more?

Are you familiar with what robots can do today?

Would you like to know what they could do for your business and how much they would cost?

The RoboDemo project offers a possibility for companies to solve their challenges of production with the help of robotics and smart manufacturing technologies. The development needs can deal with improving and enhancing the capacity, quality, profitability or occupational safety.

This project can help to reduce the risk for companies in investing in automation. As a result it is expected that the manufacturing companies will gain increased competitiveness and innovation.
